

Inventory Report

Click on the Reports menu, then Practice Management, then Inventory.

If there is a specified and particular procedure code, such as an inventory item, in the procedures and fees database, Clinic Pro will total the number of times that the inventory item has been processed during the date range that you specify.

This report tracks how many times each code was used over a specific period of time. This is very useful if you use multiple items with the same inventory item number. (Example, all supplements filled in under a VITAMIN inventory code, running this report will show how many sales have been made for vitamins)

Inventory: 1
